the wisconsin river which meanders through these towns was originally a 50 mile wide channel that advanced upstream at 10 feet per year. as the story goes, it first became a river when a local indian chief found his way along its banks and was led to a rock which he called kiyawahaw or kiyawa meaning great rock or strong rock. the explorers claim that the new river became a navigable waterway when it was discovered that if you rode downstream the water flowed away from you. it was simply a matter of learning how to ride this river. nothing is more frightening for a horseman than being led back down a river that flows away from you. these explorers discovered that if you rode upstream the water flowed toward you and that if you tried to stay away from the strong current a new current would appear which would carry you into an easier section. hence the name: indian river. today the great rock or strong rock stands as a reminder of the explorers bravery and tenacity. follow the course of the river downstream through new richmond and exit through waupun where the old sangamon river meets the wisconsin river. continue upstream through sauk city and into the town of princeton where the chicago, milwaukee and st paul railroad cut their first transcontinental rail line in 1854. continue upstream through franklin and into the town of pittsfield where the erie canal opened in 1825. finally, exit in morrison where the illinois and michigan canal ended in 1848. the great rock or strong rock is a powerful symbol of perseverance against the elements. as anyone who has ever lived in a cold climate can attest to, a house with a heated floor can increase the comfort level in the winter months. many new floor heaters and floor heating systems are efficient and very quiet which makes them very much a noisemaker when they are not in operation. it is suggested that they be not used during the summer months unless an air conditioner is not available. some systems only heat one room or small area. others heat more than one room or a whole house. some of these systems can also be used to heat a separate swimming pool, hot tub or sauna. if you've got questions about heating a whole house or more than one room, then the article below should answer most of your questions.
