With an Apple Pencil and an iPad Pro, there is no question that both perfectly compliment each other. Photoshop Sketch can be used to sketch on the iPad that you can refine in Photoshop CC on a Mac. So, instead of using the pencil and the on screen keyboard, you can refine your sketches in the device itself. The standard iPad Pro is perfect for this, as it has a big screen, nice enough handwriting recognition software, and great cameras. Unfortunately, the device does not support Photoshop CC. So, you can do the “refining” in Photoshop CC, it does make it harder to do if you edit in the browser, as the screen does not turn into a drawing tablet. If it was only for the iPad Pro and the Pencil, that would still be an absolute no-brainer product. However, the iPad Pro also supports a pressure sensitive keyboard that can be configured to work with the software. So, you could actually load Photoshop Sketch on said keyboard and make your way through Photoshop. While this is perhaps more powerful than a simple stylus, it is more costly. How do I get started with the iPad Pro? After some experimentation, I found that the best workflow for me was to use Photoshop Sketch to sketch out all of my concept ideas while using the iPad Pro keyboard to refine/edit. Although this may be more convenient than using the onscreen keyboard, it was still too cumbersome to use effectively for the purposes of designing. So, I did some user testing. It turned out that people really liked the iPad Pro project planning feature and took advantage of that. I think, however, the iPad Pro and sketching would be more powerful if they could save the sketched image and then continue the work in Photoshop CC on the Mac.
